HOW TO USE

- Adjust grinding fineness: Turn left or right of the regulator ring to different scale markings on the regulator to obtain the required fineness.
To ascertain the fineness you want, you can release the receiver and try and see some ground output first with different scale adjustments.

- Remove the cover with lever handle by taking out vertically up. Put roasted beans in (not more than 45g per time).

- Put back the cover (as picture). Hold the body by one hand and grip the handle by another to rotate the lever clockwise to proceed grinding. After grinding, release the bottom receiver by turning leftward to pour the powder out.

⚠ Fingers should not exceed the height of regulator ring to avoid scratching.

- After pouring out the coffee powder, please use the brush given for cleaning.

FINENESS ADJUSTMENT

Turn the regulator to adjust the fineness (from coarse to fine as illustrated).

⚠ Do not force to rotate over the origin that will damage the burrs.

Espresso	1-4 Scale
Hand Drip	4-8 Scale
French Press	8-9 Scale

⚠ Due to different roasted levels of beans and personal taste, grinding fineness requirements may also be different. The above are for reference only.

DAILY CARE

It is advised to use the brush given for cleaning. Washing by water is viable but do not submerge it into water or wash it for too long time. (Long period washing will shorten the life of the precision shaft)
Use only water at normal temperature to clean.
After wiping by dry cloth, put it under the sun for better drying.
Then, always store it at a dry place.
